CONTENTS OF VOLUME 177

NUMBER 1, FEBRUARY 15, 1989

Review. Problems Associated with Spin Trapping Oxygen-Centered Free Radicals in Biological Systems <i>Sovitj Pou, Daniel J. Hassett, Bradley E. Britigan, Myron S. Cohen, and Gerald M. Rosen</i>	1
Rapid Amplification of Complementary DNA from Small Amounts of Unfractionated RNA <i>Paul J. Doherty, Mario Huesca-Contreras, H. Michael Dosch, and Sueihua Pan</i>	7
A Fluorescence Assay for Enzymes That Cleave Glycosidic Linkages to Produce Reducing Sugars <i>Roger A. O'Neill, Alan Darvill, and Peter Albersheim</i>	11
Spectrophotometric Determination of Tryptophan in Intact Proteins by the Acid Ninhydrin Method <i>Ibolya Molnár-Perl and Margit Pintér-Szakács</i>	16
Capillary Zone Electrophoresis of Insulin and Growth Hormone <i>Randall G. Nielsen, G. Sitta Sittampalam, and Eugene C. Rickard</i>	20
A Sensitive Nonisotopic Hybridization Assay for HIV-1 DNA <i>George H. Keller, Dao-Pei Huang, and Mark M. Manak</i>	27
A Method for Two-Dimensional Electrophoresis of Proteins from Green Plant Tissues <i>Ragnar Flengsrud and Grethe Kibro</i>	33
Selective Silver Staining of Urease Activity in Polyacrylamide Gels <i>J. Javier Martín de Llano, Juan M. García-Segura, and José G. Gavilanes</i>	37
Protein Analysis of Mammalian Cells in Monolayer Culture Using the Bicinchoninic Assay <i>R. C. Goldschmidt and H. K. Kimelberg</i>	41
Analysis of 4- <i>N,N</i> -Dimethylaminoazobenzene 4'-Thiohydantoin Amino Acids at Sub-picomole Levels by High-Performance Liquid Chromatography: Simultaneous Manual Sequencing of Picomole Quantities of Several Polypeptides <i>Peter M. Fischer and Merlin E. H. Howden</i>	46
Size Exclusion Chromatography and Universal Calibration of Gel Columns <i>Marc le Maire, Alain Viel, and Jesper V. Møller</i>	50
Transblot Identification of Biotin-Containing Proteins in Rat Liver <i>Tatsuji Haneji and Samuel S. Koide</i>	57
Simultaneous Determination of Iodate and Periodate by Capillary Zone Electrophoresis: Application to Carbohydrate Analysis <i>Susumu Honda, Kenji Suzuki, and Kazuaki Kakehi</i>	62
Synthesis and Properties of a Nonhydrolyzable Adenosine Phosphosulfate Analog <i>L. Callahan, K. Ng, D. H. Geller, K. Agarwal, and N. B. Schwartz</i>	67
An Automated Analysis of Chemotaxis <i>in Vitro</i> Using a Computer-Assisted Scanning Densitometer <i>Junko Shimura, Kazuo Suzuki, Masayuki Mitsuka, and Kohei Umezu</i>	72
A Chromogenic Assay for the Detection of Plasmin Generated by Plasminogen Activator Immobilized on Nitrocellulose Using a <i>para</i> -Nitroanilide Synthetic Peptide Substrate <i>Ellen S. Kulisek, Stig E. Holm, and Kenneth H. Johnston</i>	78
Rapid Identification of Microorganisms by Nucleic Acid Hybridization after Labeling the Test Sample <i>Nanibhushan Dattagupta, Peter M. M. Rae, Edward D. Huguenel, Elizabeth Carlson, Andrew Lyga, Jeffery A. Shapiro, and James P. Albarella</i>	85
The Generation of Radiolabeled DNA and RNA Probes with Polymerase Chain Reaction <i>David B. Schowalter and Steve S. Sommer</i>	90
A Preparative Suspension Culture System Permitting Quantitation of Anchorage-Independent Growth by Direct Radiolabeling of Cellular DNA <i>Richard K. Assoian, Lori A. Boardman, and Sophia Drosinos</i>	95
Refinement of the Coomassie Brilliant Blue G Assay for Quantitative Protein Determination <i>Bernd-Michael Löffler and Hans Kunze</i>	100
A Sensitive and Continuous Fluorometric Assay for Phospholipase A ₂ Using Pyrene-Labeled Phospholipids in the Presence of Serum Albumin <i>François Radvanyi, Lynda Jordan, Françoise Russo-Marie, and Cassian Bon</i>	103

Estimation of Circular DNA Size Using γ -Irradiation and Pulsed-Field Gel Electrophoresis	<i>Stephen M. Beverley</i>	110
Determination of Inositol 1,4,5-Trisphosphate Levels in <i>Dictyostelium</i> by Isotope Dilution Assay	<i>Peter J. M. Van Haastert</i>	115
Oligodeoxynucleotide-Directed Cleavage and Repair of a Single-Stranded Vector: A Method of Site-Specific Mutagenesis	<i>Delin Zhu</i>	120
A New Linear Plot for Standard Curves in Kinetic Substrate Assays Extended above the Michaelis-Menten Constant: Application to a Luminometric Assay of Glycerol	<i>Arne Lundin, Peter Arner, and Johan Hellmér</i>	125
Automatic Luminometric Kinetic Assay of Glycerol for Lipolysis Studies	<i>Johan Hellmér, Peter Arner, and Arne Lundin</i>	132
Thin-Layer Chromatography Can Resolve Phosphotyrosine, Phosphoserine, and Phosphothreonine in a Protein Hydrolyzate	<i>Eleanor Neufeld, H. Joseph Goren, and Donna Boland</i>	138
Molecular Imprinting of Amino Acid Derivatives at Low Temperature (0°C) Using Photolytic Homolysis of Azobisnitriles	<i>Daniel J. O'Shannessy, Björn Ekberg, and Klaus Mosbach</i>	144
Biochemical Characterization of an Autoradiographic Method for Studying Excitatory Amino Acid Receptors Using L-[³ H]Glutamate	<i>Marion Cincotta, Roger J. Summers, and Philip M. Beart</i>	150
A Colorimetric Assay for the Measurement of D-Glucose Consumption by Cultured Cells	<i>Diane A. Blake and Natalie V. McLean</i>	156
Cyanogen Bromide Cleavage at Methionine Residues of Polypeptides Containing Disulfide Bonds	<i>S. Villa, G. De Fazio, and U. Canosi</i>	161
Iodometric Method for Detection of β -Lactamase Activity in Yeast Cells Carrying Ampicillin Resistance Gene in Chimeric Plasmids	<i>Shu-Shyang Kuo and Teng-Yung Feng</i>	165
Stabilization of Immobilized Lectin Columns by Crosslinking with Glutaraldehyde	<i>Malka G. Scher, Wendy G. Resneck, and Robert J. Bloch</i>	168
Colorimetric Assay for Free and Bound L-Fucose	<i>Menashi A. Cohenford, Ann Abraham, John Abraham, and Joel A. Dain</i>	172
Adsorption of Proteins onto Glass Surfaces and Its Effect on the Intensity of Circular Dichroism Spectra	<i>Chuen-Shang C. Wu and G. Chi Chen</i>	178
Protein Modification by Diazotized Arsanilic Acid: Synthesis and Characterization of the Phenylthiohydantoin Derivatives of Azobenzene Arsonate-Coupled Tyrosine, Histidine, and Lysine Residues and Their Sequential Allotment in Labeled Peptides	<i>Beat Schwaller and Hans Sigrist</i>	183
Preparation of <i>Escherichia coli</i> Elongation Factor Tu-Guanosine 5'-Triphosphate Analogs	<i>Katherine Delaria and Frances Jurnak</i>	188
Isolation of Plasma Membranes from Mammary Gland by Two-Phase Polymer Partitioning	<i>Thomas W. Keenan, H. Mohammed Valivullah, and Jane T. Dunlevy</i>	194
Two Methods to Detect DNA Fragments Produced by Restriction Enzymes	<i>Robert W. Chapman and Bonnie L. Brown</i>	199
An Immunoblot Assay for the Simultaneous Quantification of Several Antigens	<i>Karl Schilling and M. Cécilie Aletsee-Ufrecht</i>	203
Determination of Physostigmine in Plasma by High-Performance Liquid Chromatography and Fluorescence Detection	<i>Nabil M. Elsayed, John R. G. Ryabik, Suellen Ferraris, Conrad R. Wheeler, and Don W. Korte, Jr.</i>	207
Sodium Dodecyl Sulfate Enhancement of Quantitative Immunoenzyme Dot-Blot Assays on Nitrocellulose	<i>Craig E. Smith, Phillip R. Musich, and David A. Johnson</i>	212

NUMBER 2, MARCH 1989

Review. Micropreparative Procedures for High Sensitivity Sequencing of Peptides and Proteins	<i>Richard J. Simpson, Robert L. Moritz, Geoffrey S. Begg, Michael R. Rubira, and Edouard C. Nice</i>	221
--	---	-----

1- <i>p</i> -Chlorophenyl-4,4-dimethyl-5-diethylamino-1-penten-3-one Hydrobromide, a Sulfhydryl-Specific Compound Which Reacts Irreversibly with Protein Thiols but Reversibly with Small Molecular Weight Thiols <i>Bulent Mutus, Jerome D. Wagner, Christopher J. Talpas, Jonathan R. Dimmock, Oludotun A. Phillips, and R. Stephen Reid</i>	237
Fluorometric Determination of Amyloid Fibrils <i>in Vitro</i> Using the Fluorescent Dye, Thioflavine T <i>Hironobu Naiki, Keiichi Higuchi, Masanori Hosokawa, and Toshio Takeda</i>	244
Microbial Methodological Artifacts in [³ H]Glutamate Receptor Binding Assays <i>Yukio Yoneda and Kiyokazu Ogita</i>	250
Western Immunoblotting: Temperature-Dependent Reduction in Background Staining <i>Eric T. Thean and Ban Hock Toh</i>	256
An Enzyme Immunoassay for Estimating Small Numbers of Cells <i>Farhad Faraji-Shadan and Phillip D. Bowman</i>	259
A Method for Detecting Proteins Immobilized on Nitrocellulose Membranes by <i>in Situ</i> Derivatization with Fluorescein Isothiocyanate <i>Brian Houston and Diana Peddie</i>	263
Analysis of Ter-Ter Enzyme Kinetic Mechanisms by Computer Simulation of Isotope Exchange at Chemical Equilibrium: Development and Application of ISOTER, a Personal-Computer-Based Program <i>Frederick C. Wedler and Robert W. Barkley</i>	268
Pulsed Field Gel Electrophoresis Techniques for Separating 1- to 50-Kilobase DNA Fragments <i>Bruce W. Birren, Eric Lai, Leroy Hood, and Melvin I. Simon</i>	282
Polyacrylamide Gel Miniaturization Improves Protein Visualization and Autoradiographic Detection <i>Mirza A. Mohamed, Keith A. Lerro, and Glenn D. Prestwich</i>	287
A Chemiluminescent Assay for Measuring Avermectin Binding Sites <i>James M. Schaeffer, Janet H. Stiffey, and Helmut Mrozik</i>	291
Negative Ion Fast Atom Bombardment Mass Spectrometry for Native Gangliosides Using a Neutral Matrix <i>Ryuichi Isobe, Yasuhiro Kawano, Ryuichi Higuchi, and Tetsuya Komori</i>	296
Phycoerythrin Fluorescence-Based Assay for Peroxy Radicals: A Screen for Biologically Relevant Protective Agents <i>Robert J. DeLange and Alexander N. Glazer</i>	300
Analysis of Oxidative Warfarin Metabolites by Thermospray High-Performance Liquid Chromatography/Mass Spectrometry <i>David C. Spink, Kenneth M. Aldous, and Laurence S. Kaminsky</i>	307
Electroelution of Antigens Immobilized on Antibody-Linked Affinity Matrices <i>Klaus Schulze-Osthoff, Elmar Michels, Bruno Overwien, and Clemens Sorg</i>	314
Amino Acid Analysis: Determination of Cysteine plus Half-Cystine in Proteins after Hydrochloric Acid Hydrolysis with a Disulfide Compound as Additive <i>Vibeke Barkholt and Arne L. Jensen</i>	318
Novel Reconstitution and Enzymatic Assay of the Mitochondrial Tricarboxylate Carrier <i>Roland Lüthy and Angelo Azzi</i>	323
Analysis of Unsaturated Disaccharides from Glycosaminoglycuronan by High-Performance Liquid Chromatography <i>Keiichi Yoshida, Satoshi Miyauchi, Hiroshi Kikuchi, Akira Tawada, and Kiyochika Tokuyasu</i>	327
High Resolution KSCN/CsSCN Equilibrium Gradients Effectively Separate a Population of Density Labeled Proteins from Unlabeled Proteins <i>William H. Phillips, Charlotte Ann Peterson, and Robert M. Grainger</i>	333
A Colorimetric Assay for the Simultaneous Measurement of Plasminogen Activators and Plasminogen Activator Inhibitors in Serum-Free Conditioned Media from Cultured Cells <i>Pierre Leprince, Bernard Rogister, and Gustave Moonen</i>	341
The Quantitation by Radioimmunoassay of 2'-Deoxyuridine 5'-Triphosphate in Extracts of Thymidylate Synthase-Inhibited Cells <i>Evelyn M. Piall, Nicola J. Curtin, G. Wynne Aherne, Adrian L. Harris, and Vincent Marks</i>	347
Quantitation of Total DNA per Cell in an Exponentially Growing Population Using the Diphenylamine Reaction and Flow Cytometry <i>Curtis T. Thompson and James A. Dvorak</i>	353

Preparative Isoelectric Focusing in Ampholine Electrofocusing Columns versus Immobiline Polyacrylamide Gel for the Purification of Biologically Active Leukoregulin	Charles H. Evans, Anna C. Wilson, and Balázs A. Gelléri	358
Fluorescence-Based Viability Assay for Studies of Reactive Drug Intermediates	J. S. Leeder, H.-M. Dosch, P. A. Harper, P. Lam, and S. P. Spielberg	364
Automated Synthesis of <i>N</i> -Bromoacetyl-Modified Peptides for the Preparation of Synthetic Peptide Polymers, Peptide-Protein Conjugates, and Cyclic Peptides	Frank A. Robey and Raymond L. Fields	373
Purification of Plasmid DNA by Fast Protein Liquid Chromatography on Superose 6 Preparative Grade	J. Keith McClung and Robert A. Gonzales	378
A Lectin-Immunofluorometric Assay Using an Immobilized <i>Bandeiraea simplicifolia</i> II Lectin for the Determination of Galactosylation Variants of Glycoproteins	Jaakko Parkkinen and Ulla Oksanen	383
Sequential Two-Dimensional and Acetic Acid/Urea/Triton X-100 Gel Electrophoresis of Proteins	Jacques R. Vanfleteren	388
Labeling of DNA Probes with a Photoactivatable Hapten	George H. Keller, Dao-Pei Huang, and Mark M. Manak	392
Two Kinetic Methods to Study the Regulation of Mammalian Hexokinases	W. Terry Jenkins and Cynthia C. Thompson	396
Quantitation of Ca^{2+} Uptake by Arsenazo III-Loaded Liposomes	Patricia M. Sokolove and Mary Beth Kester	402
Phosphoamino Acid Analysis of Protein Immobilized on Polyvinylidene Difluoride Membrane	Ellen Hildebrandt and Victor A. Fried	407
Discriminatory ^{32}P 3'-End Labeling of Restriction Endonuclease Co-digested DNA Fragments	Gerard F. LeBlond and Paul O. P. Ts'o	413
Determination of Carbonyl Groups in Oxidatively Modified Proteins by Reduction with Tritiated Sodium Borohydride	Anke-G. Lenz, Ulrich Costabel, Shmuel Shaltiel, and Rodney L. Levine	419
Author Index for Volume 177		426

NOTICE

The Subject Index for Volume 177 will appear in the December 1989 issue as part of a cumulative index for the year 1989.

ANALYTICAL BIOCHEMISTRY

Methods in the Biological Sciences

INFORMATION FOR AUTHORS

Analytical Biochemistry is an international journal that publishes original articles on methods and methodology of interest to the biological sciences and all fields that impinge on biochemical investigation. In addition to the expected techniques that apply to biochemical preparations and analysis, the following should be considered as within the scope of the journal:

- Cell biology and cell, tissue, and organ culture methods that are of general application.

- Membranes and membrane proteins. These methods form a major section of interest.

- Procedures of interest in the field of molecular genetics including those necessary for cloning, sequencing, and synthesis of nucleic acids and for mutagenesis.

- Purification of enzymes and other proteins, but only if the methods are both novel and applicable generally, i.e., the interest is in a means of purification rather than in the protein that is being purified.

- Immunological techniques both analytical and preparative, if they are of general applicability by biochemists. Immunoassays are included but only if a unique approach is introduced rather than the determination of a substance not previously assayable.

- Pharmacological and toxicological research techniques that offer a biochemical approach.

- Review articles dealing with timely topics. Although these are generally invited, unsolicited outlines or manuscripts will be considered.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in **Analytical Biochemistry** represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted in quadruplicate to:

Analytical Biochemistry

Editorial Office
Seventh Floor
1250 Sixth Avenue
San Diego, California 92101

In the case of rejected manuscripts, only one copy of the manuscript will be returned to the author.

An extended Instructions to Authors is published in the July issue during odd-numbered years. Reprints are available from the Editorial Office. Authors should consult this Information for details on nomenclature, IUPAC-IUB rules and recommendations, and accepted abbreviations.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. In order to facilitate the processing of manuscripts, the journal requests that at least four copies be submitted, each copy to include all figures (originals or glossy prints) and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about $8\frac{1}{2} \times 11$ inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 55 letters and spaces), an abstract (250 words), the address to which proof should be mailed, and the corresponding author's telephone number and fax or telex number. In creating a title for your paper, please omit words such as *novel*, *rapid*, *improved*, *simple*, *sensitive*, *efficient*, *convenient*, *new*. Each is felt to be redundant and actually slows down the reader who is scanning the article titles and wants to know more about the method itself. Please substitute informative words that will give readers a more complete idea of the usefulness of your paper with regard to the limitations of their equipment or sample type. For example, what *kind* of method are you describing? Abbreviations should not be used in the article title or running title. Please number all pages of the manuscript. The appropriate subject category should be indicated on the title page.

Text. The suggested organization of an article is: abstract; introductory statement; Materials and Methods; Results; Discussion; Acknowledgments; References. Some of these sections may be combined if the presentation is thereby made clearer or more effective. Although this is the general form, the journal will accept short papers of approximately two printed pages that are arranged without specific sections except for a short abstract.

Names of chemical or organic substances should follow the recommendations of the IUPAC-IUB Joint Combined Commission on Biochemical Nomenclature (JCBN) as published in the extended Instructions for Authors, appearing in the July issue of this journal during odd-numbered years.

Authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text: each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for photoreproduction. A convenient size for drawings is $8\frac{1}{2} \times 11$ in. (21×27.5 cm). Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper if used should be ruled in blue. Grid lines that are to show in the final reproduction should be inked in black. Properly prepared glossy prints are acceptable.

Photographs must be kept to a minimum. All photographs should be submitted as single glossy prints with strong contrasts and not mounted on cardboard; the magnification should be indicated by a scale where possible. Simple histograms should be avoided. A table or a paragraph in the text is preferred.

Illustrations in color can be accepted only if the authors defray the cost.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. Each table should have a short explanatory title.

Authors may wish to submit complex tables as camera-ready copy. In this way, they are spared tedious proof-reading and the chance of error is reduced. Tables submitted as camera-ready copy should be typed single-spaced when-

ever possible, and preferably submitted as 5×7 -in. glossy prints.

Footnotes should be designated in text by superscript numbers and typed on a separate sheet. Footnotes to tables should be identified with lowercase italic superscript letters and placed at the bottom of the table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Abbreviations of journal titles should follow the style used in *Chemical Abstracts Service Source Index*, 1985. Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Jackson, G. E. D., and Young, N. M. (1987) *Anal. Biochem.* **162**, 251-256.
2. Bovey, F. A., and Jelinski, L. W. (1983) Chain Structure and Conformation of Macromolecules, p. 150, Academic Press, New York.
3. Britton, G. (1985) in *Methods in Enzymology* (Law, J. H., and Rilling, H. C., Eds.), Vol. 111, pp. 113-149, Academic Press, Orlando, FL.

Proofs. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.
